- Thesis: [Tracking price system for Tiki productions.](#)

SUMMARY

- Strong at programming (frontend) for web applications and familiar with backend technologies.
- Strong in algorithms, data structure, design, and problem-solving skills.
- Interested in improving the performance of applications, applying new technologies, best practices, and building things from scratch.

TECHNICAL EXPERIENCE

My github: <https://github.com/lethanhtupk>

Projects

Nearme

RikkeiSoft

Summer 2020 - Now

A transportation company located in Japan.

The company offers to book and share shuttle service through cross-platform applications.

I have learned everything that is needed to complete the work, discussing with the customers to clarify the problems, suggest solutions, expand my knowledge breadthwise in web development. As well as pay attention to performance and coding style.

Related technologies: JavaScript, Typescript, React, NextJS, GraphQL, NodeJS.

Personal projects

Product uploader

A web application that helps speed up the uploading production process by allowing users to create a template for their future production with a set of predefined properties. Then they can choose their desired template with proper product images and upload the product by WooCommerce API.

Related technologies: JavaScript, Python, ReactJS, Django.

<https://product-uploader-2f031.web.app/>

React application boilerplate

A sample React application that setups with full of modern development tools which makes my personal coding experience better and also reduce the duplicated work when I start a new project. This project uses Webpack as module bundler, ESLint and Prettier for enforcing the coding style and formatting code, babel for transforming code, and improving compile time with typescript.

Related technologies: JavaScript, Typescript, ReactJS, tailwindcss, webpack, eslint, ...
